A word from the Secretary General

AGROECOLOGY GAINS GROUND IN THE CONGO BASIN

Six years ago, SAILD made a commitment to agroecology. Over the years, its actions in support of this cause have grown steadily. In 2024, the organisation held the first ever regional forum on agroecology in Cameroon and the Congo Basin, known as FORA.

The event brought together nearly 300 participants from 13 countries in Africa and Europe around the central theme of 'agroecology for sustainable food systems and the preservation of the Congo Basin's forests'. SAILD enjoyed great success with this meeting.

In parallel with this activity, SAILD continued its work for rural development. We have contributed to improving the incomes of communities in eastern Cameroon, in particular by promoting a number of economic activities such as beekeeping and poultry farming.

In addition, various agroecological practices have been promoted in the eastern and far northern regions in order to strengthen food security for the population.

On the other hand, our organisation has continued its fight against the degradation of protected areas. A participatory management committee has been set up to restore the forest landscape of Deng Deng National Park. Similarly, local populations have been trained in the restoration of protected areas.

In other regions of the country, mainly in the centre and south, the focus has been on disseminating knowledge about organic farming and agroecology through information days and training seminars.

The newspaper The Farmer Voice and the Documentation Centre for Rural Development have made information accessible to all.

The actions carried out during 2024 were made possible thanks to all the SAILD staff, whom we encourage, and our partners, to whom we express our gratitude.

Hozier Nana Chimi

The Support Service for Grassroots Development Initiatives (SAILD) is a non-governmental organisation that has been working to promote rural development in Cameroon since 1988.

VISION

A fair, just and united world where people flourish and live decently from the fruits of their labour in a healthy and balanced environment.

MISSION

To support farmers and communities living near areas where natural resources are exploited in their entrepreneurial and agropastoral initiatives with a view to their socio-economic and cultural development and the sustainable management of the resources on which they depend.

BOARD OF DIRECTORS

Chairperson: Thaddée Yossa
Secretary General: Hozier Nana Chimi
Treasurer: René Charles Amalanga
Internal Auditor: Lorenzo Manzoni
External Auditor: Guillaume Djeukam

STRUCTURE

SAILD has a General Secretariat based in Yaoundé and regional offices, the most important of which are the SAILD office in Maroua, which covers the three northern regions of Cameroon, the SAILD office in Bamenda in the North-West region and the SAILD office in Bertoua in the East region. In terms of its areas of intervention, SAILD is organised around three programmes: the food security and nutrition programme, the natural resource management programme and the rural communication programme run by the Documentation Centre for Rural Development (CDDR) and the newspaper 'La Voix Du Paysan' (The farmer's Voice).

The CDDR is a documentation centre which, in addition to the agro-pastoral advisory services it offers, has a library whose collection consists of books on all areas of rural development.

'La Voix Du Paysan (The Farmer's Voice) is a monthly newspaper that has been published since 1988 and covers agricultural and pastoral topics, particularly through technical data sheets.

STRATEGIC ACTIONS FOR THE CONSERVATION AND RESTORATION OF PROTECTED AREAS

© Abbo Mohamadou/SAILD

COMMUNITIES SUPPORTED IN INCOME GENERATING ACTIVITIES

Deng Deng National Park (PNDD) is a protected area created in 2010 in the East Cameroon region. It has nineteen villages on its periphery where the populations are heavily dependent on natural resources for their subsistence activities.
To combat the degradation of the PNDD and keep local residents away from the park, in 2024 SAILD introduced income-generating activities in the villages located in the northern part of the park. These include Lom1, Liguim and Tête d'Eléphant in the department of Lom-et-Djérem. In addition to monitoring the agroecological practices initiated last year, the beneficiary populations were trained in beekeeping and modern poultry farming techniques. To put what they had learned into practice, they were provided with beekeeping and livestock equipment. Each household received a breeding flock of six hens and a cockerel.
These activities, implemented as part of the project 'Optimising conservation in Deng Deng National Park by strengthening the capacities of local communities in agroecological practices' and funded by the IUCN, have contributed to improving the incomes of 34 households comprising more than 200 people.

SIGNIFICANT IMPACT

The project has been a great help to local communities: 'Before, I didn't know how to care for chickens using agroecological methods, but thanks to the training I received, I now treat my chickens using local, low-cost products without having to resort to the pharmacy,' said Philippe Amia, a poultry farmer who benefited from the project.

Honey, eggs and chicks are a significant source of income and contribute to household food security. According to statistics from a survey, 100% of beneficiaries have applied at least one agroecological practice. Fish farming and small-scale poultry farming have also been well received in the three villages.

To monitor illegal activities around the PNDD, SAILD has set up a participatory management committee (CRGP) that operates in the three villages. This committee helps to resolve issues facing the park, including the problem of local residents' rights of use, cultural practices, and human/wildlife conflicts. It also supports ecotourism and the monitoring of the protected area.

Participatory management committee set up

THE FIRST STEPS IN THE RESTORATION OF DENG DENG NATIONAL PARK

Through the 'participatory restoration project for the forest landscape of Deng Deng National Park (PNDD)', SAILD has carried out various activities this year in five villages (Tête d'éléphant, Lom 1, Kambokassi, Hona and Mansa) in the districts of Belabo and Bétaré Oya in eastern Cameroon. These include organising an information and awareness-raising tour about the project for local communities and administrations.

The main achievement is the training of 32 stakeholders in the management and restoration of the PNDD forest landscape (communities, local administrations in charge of forests, the environment, agriculture, livestock and territorial administration, decentralised local authorities), including 6 women and 26 men. Two major flagship activities of the project were also launched.

A methodological study to assess opportunities for forest landscape restoration (MEOR) at the PNDD landscape scale and participatory mapping of community territories (villages and land uses) in the park landscape were carried out in the target villages.

© Franck Ndjodo/SAILD

© Franck Ndjodo/SAILD

02 WORKING GROUPS ESTABLISHED

«The MEOR study report presents the causes of landscape degradation and proposes priority restoration actions. Data was collected from 94 households, 32% of which were headed by women.

The results reveal three main activities: agriculture (87%), trade (5%) and fishing (2%),» said project manager Desouza Feujio.

Similarly, SAILD has set up two multi-stakeholder working groups in the districts of Bétaré Oya and Belabo. Each group is tasked with identifying and listing the restoration needs in the park, developing a roadmap for restoration, and ensuring the effective implementation and monitoring of restoration activities.

All these actions were carried out with the support of the International Climate Initiative (IKI) programme, funded by the German Federal Government.

2

FOOD SECURITY ENSURED THROUGH AGROECOLOGY

© Jean Kana/SAILD

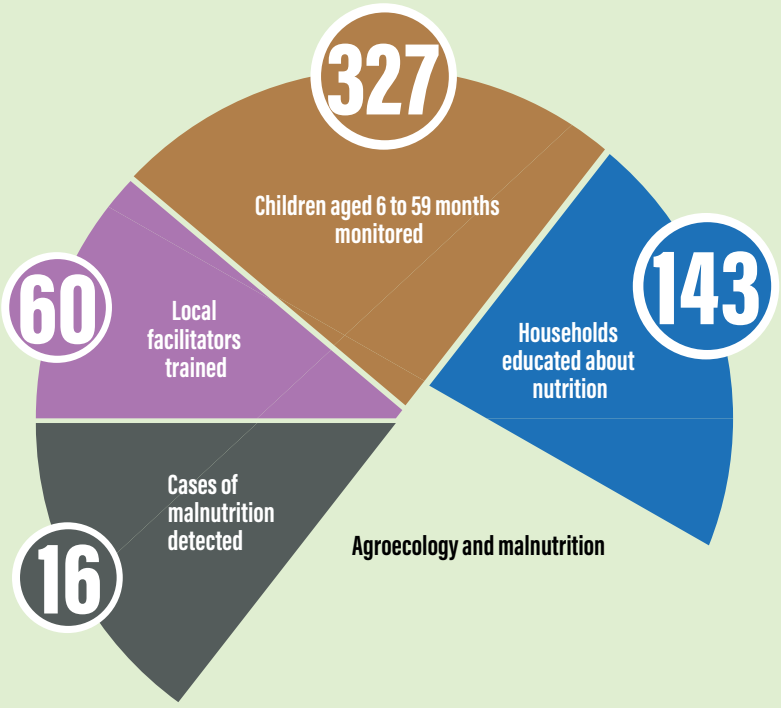
16 CASES OF MALNUTRITION DETECTED IN 2024 COMPARED TO 144 IN 2023

In 2024, major food security support initiatives were carried out in 20 selected villages in the East and Far North regions as part of the project 'Agroecology for strengthening food and nutritional security for smallholder farming families in the East and Far North regions of Cameroon (AE-SAN)', funded by the German organisation Bread for the World.

Nutrition activities such as nutritional awareness campaigns, public cooking demonstrations and monitoring of children's nutritional status were carried out within the communities.

In all of these localities, only 16 cases of malnutrition were detected, compared to 144 in 2023. This was made possible by educational talks that raised awareness among more than 100 households in order to improve women's knowledge of nutrition and good hygiene practices.

The main topics covered were food groups and their role in the body; recognising the signs of malnutrition, the causes and consequences of malnutrition, and solutions to malnutrition; feeding infants and young children; and hygiene in the home. Similarly, with accompanying measures, the nutritional status of 327 children aged 6 to 59 months was monitored in the Far North.



AGROECOLOGY TO STRENGTHEN FOOD SYSTEMS

Over the past year, SAILD has also contributed to food security through the dissemination of agroecological practices and support for the establishment of seed banks in the 20 targeted intervention villages.

Following recycling sessions in the Eastern and Far North regions, 171 people were trained in small-scale agroecological livestock farming. The topics covered included habitat selection, feed production using local products, and processing techniques, with the aim of improving beneficiaries' livestock farming practices for better yields.

During the year, 288 small-scale producers, including 120 women, received training in harvest management techniques through 10 training sessions per village. The focus was on storage techniques and the production of an ash-based insect repellent for seed preservation. In addition to the 1,350 smallholder farmers trained last year, 620 smallholder farmers, including 327 women, benefited from monitoring and advice for their farms. As a result, 94% of beneficiaries replicated at least two agroecological practices.

OVER 144 HECTARES DEDICATED TO AGROECOLOGY

According to Rodrigue Kouang, head of the Agroecology Programme, the results obtained are satisfactory. «In the regions, we visited 13 replication fields and more than 20 family farms dedicated to agroecology. More than 144 hectares have been developed using agroecological practices. Overall, we have recorded a production of more than 55 tonnes of soybeans and 70 tonnes of sorghum in the Far North,» he reports enthusiastically.

He continues, «Some beneficiaries have promoted agroecology at events. Five of them exhibited around 300 kg of seeds, agricultural products and soy-based foods (milk, cake, coffee) at the mini agropastoral fair in the Far North. At the Cameroon Farmers' Seed Fair (FOSPAC) held in Esse (Centre), two beneficiaries from the East had the opportunity to share their experiences on seeds and agroecological practices with farmers from other African countries,» he concluded.

SHARING KNOWLEDGE ABOUT ORGANIC FARMING AND AGROECOLOGY

© Ivan Kanzu/SAILD

CCAB-PCAC: EXPANDING GOOD AGROECOLOGICAL PRACTICES

Since its creation, SAILD has been supporting farmers and communities in their agropastoral initiatives. In 2024, the organisation accomplished this mission by disseminating knowledge on organic farming and agroecology in the eastern, southern and central regions.

As part of the 'Knowledge Centre for Organic Agriculture and Agroecology in Africa' (CCAB) project supported by the German cooperation agency GIZ, SAILD has used a variety of approaches. Thanks to training seminars on organic and agroecological agriculture and livestock farming, more than 600 people, including 304 women, have been trained.

A WIDE RANGE OF DOCUMENTATION FOR AGRO-PASTORAL ENTREPRENEURS

One of SAILD's main objectives is to make useful information available to those working in rural areas. In 2024, the agricultural advisory services developed within its Documentation Centre for Rural Development (CDDR) reached 41,350 people. This was achieved through its tools and channels for sharing advice and disseminating information. These include technical data sheets, a question-and-answer service (SQR), a library and digital platforms (Facebook, WhatsApp, email).

In addition, an information day on beetle farming organised in Bertoua in the east brought together 72 participants, 42% of whom were women. Another 573 people were educated on agroecological practices through 42 videos shown during 13 screening sessions. Four projects on pond fish farming, monitoring and maintenance of an old cocoa plantation, papaya cultivation and chilli cultivation were monitored as part of the farm advisory service.

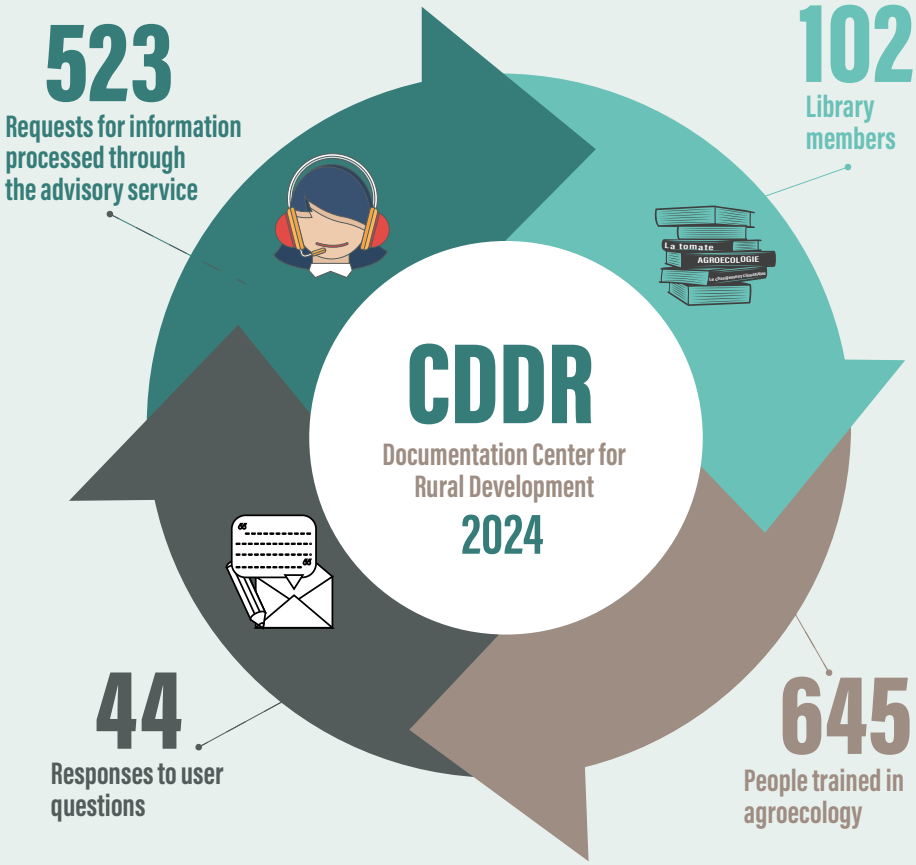
WIDE RANGE OF DOCUMENTATION FOR AGRO-PASTORAL ENTREPRENEURS

Making useful information available to rural stakeholders is one of SAILD's main objectives. In 2024, the agricultural advisory services developed within its Documentation Center for Rural Development (CDDR) reached 41,350 people. This was achieved through its tools and channels for sharing advice and disseminating information.

These included technical data sheets, a question-and-answer service (SQR), a library, and digital platforms (Facebook, WhatsApp, email).In addition, an information day on beetle farming held in Bertoua in the east brought together 72 participants, 42% of whom were women.

Another 573 people were educated on agroecological practices through 42 videos shown during 13 screening sessions. Four projects on pond fish farming, monitoring and maintenance of an old cocoa plantation, papaya cultivation, and chili pepper cultivation were monitored as part of the farm advisory service.



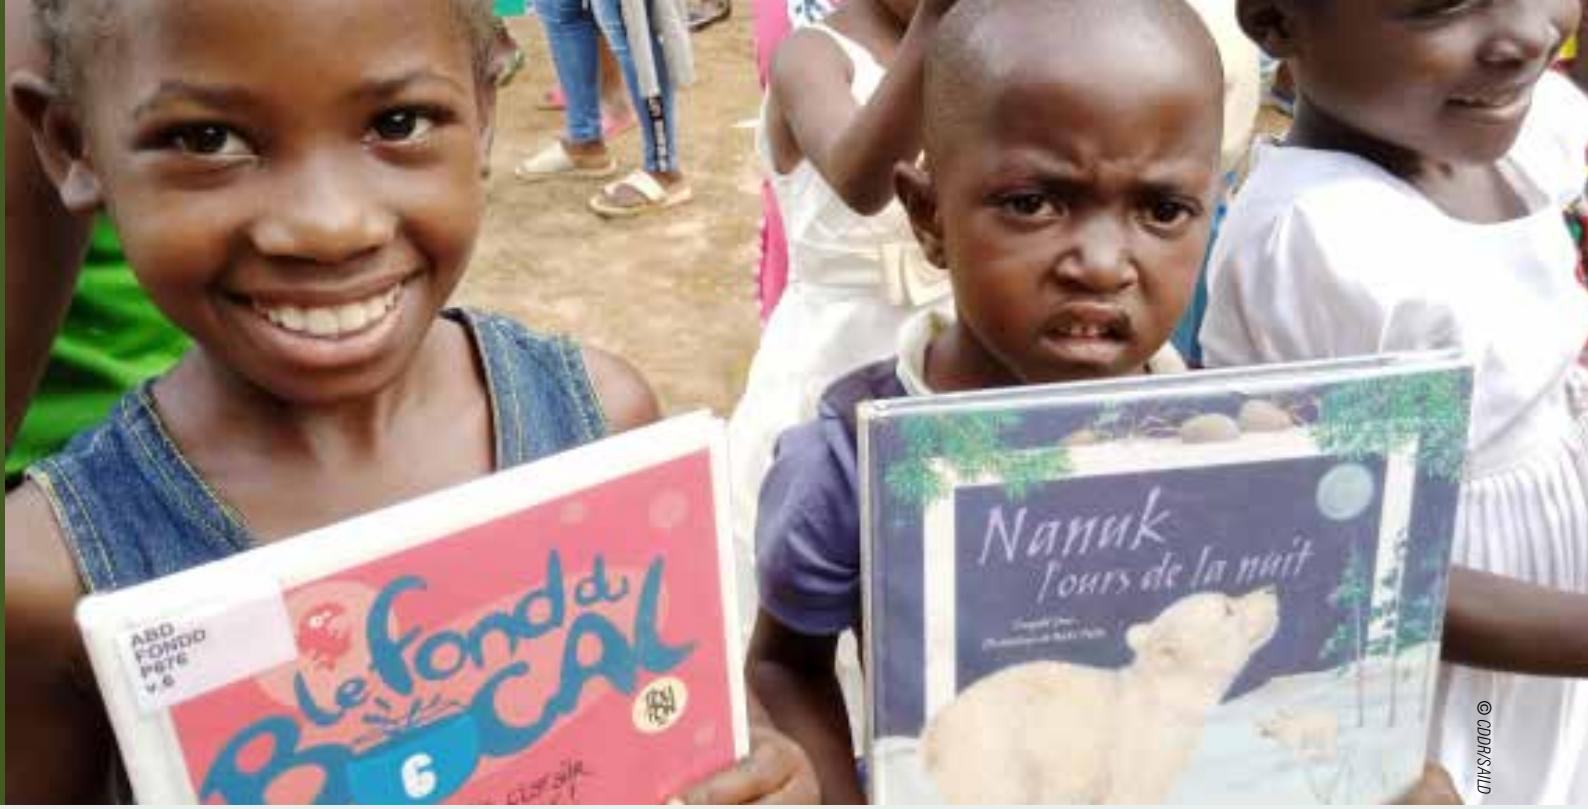
TWO AGROECOLOGY TECHNICAL DATA SHEETS PRODUCED

BIOCHAR MANUFACTURING

Biochar is a type of charcoal made from crop residues, straw or wood. Discover different agroecological production techniques, the biomass required for its manufacture, the constraints involved, its multiple uses and producers' experiences.

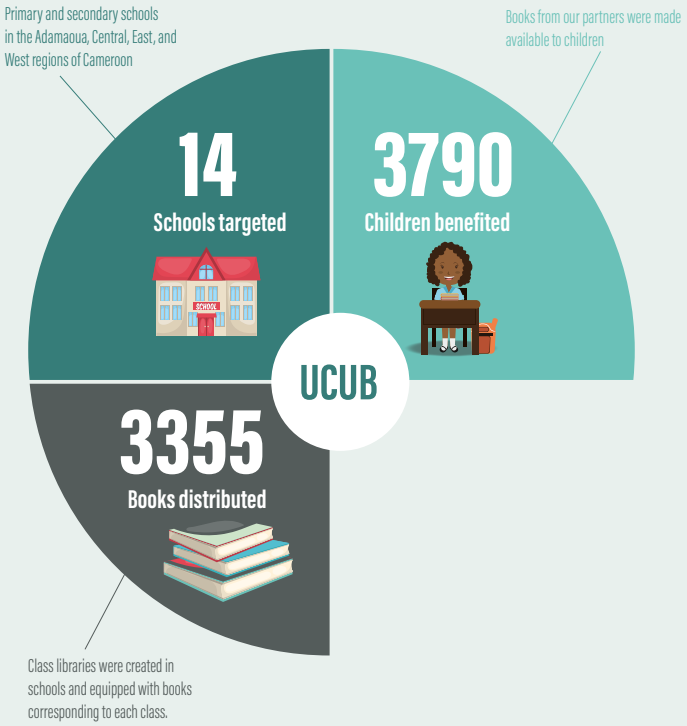
AQUAPONICS

Aquaponics is a farming system that combines aquaculture (fish farming) and hydroponics (soilless plant cultivation). In a booklet, SAILD outlines the principles of aquaponics and the advantages and constraints of this agroecological practice.



OVER 3,000 BOOKS DISTRIBUTED IN RURAL AREAS

The CDDR's 'One Classroom, One Library' (UCUB) programme works to develop culture among rural children through books, building their spirit of moderation, tolerance and creativity. Over the course of the year, it has equipped 14 primary and secondary schools with classroom libraries in the Adamaoua, Centre, East and West regions of Cameroon. Approximately 3,355 books have been made available to 3,790 children attending school in rural areas.



LA VOIX DU PAYSAN :
THE MONTHLY MAGAZINE FOR RURAL ENTREPRENEURS

© Jean Kanal SAILD

This channel for disseminating knowledge has been published for 36 years by SAILD. Thanks to pages dedicated to readers' letters, production reports, health/nutrition, and dynamic reporting, rural information is made accessible to farmers and rural entrepreneurs.

Thus, over the course of the year, various reports were produced and published in editions of the newspaper "La Voix Du Paysan" on good agroecological practices. The reports focused in particular on plantain production in agroecological transition, small-scale agroecological chicken farming, and organic pineapple production.

In addition to its print format, the newspaper is also available in electronic form with 6,500 subscribers to diversify the sources of access to the information produced. The monthly magazine for rural entrepreneurs has digital platforms including a website, a Facebook page with 24,000 subscribers, and a YouTube channel with 11,900 subscribers.

A REGIONAL FORUM FOR BETTER ADOPTION OF AGROECOLOGY

In 2024, SAILD was a major advocate for the promotion of agroecology in the Congo Basin. In November 2024, the NGO organised the Regional Forum on Agroecology in the Congo Basin in partnership with a number of international organisations.

The event, held in Yaoundé, Cameroon, was attended by around 270 people from 13 countries in Africa and Europe. 'Agroecology for the sustainability of food systems and the preservation of forests in the Congo Basin' was the central theme of the forum.

Over three days, the aim was to consolidate ideas and increase stakeholder ownership of the need to adopt agroecology to address the effects of climate change in the Congo Basin. A national organic farming and agroecology fair was held in conjunction with the forum.

The initiative, which aimed to provide a meeting place for producers and consumers of agroecological products, attracted nearly 2,000 visitors.

For SAILD Secretary General Hozier Nana Chimi, agroecology is a promising path. «Through this meeting, we hope that key stakeholders will realise that there are ways to achieve sustainable food systems.

Agroecology seems to be the most promising path. We have all the assets we need to return to agroecology, which was our traditional practice. The Congo Basin is a vast, rich area; it is the second green lung of our planet. With our support and that of decision-makers, things will start to happen.»

SAILD COMMITTED TO VACCINE SOVEREIGNTY IN CAMEROON

The aim of the advocacy project 'Acting for vaccine sovereignty in Cameroon', led by SAILD since 2024, is to enable an increase in national resources allocated to vaccination, so that Cameroon can take ownership of the financing of its vaccination programmes.

The organisation is therefore committed to conducting budgetary advocacy to ensure that the government honours its commitments to the Global Alliance for Vaccines and Immunisation (GAVI). In particular, this involves enabling access to primary health care and the provision of vaccination services, ensuring the timely payment of GAVI co-financing obligations, reducing the number of children who have not received any doses of vaccine, and increasing the country's vaccination coverage.

REPAC, A TOOL FOR PROMOTING AGROECOLOGY

© Rodrigue Kouang/SAILD

Through the first Network for the Promotion of Agroecology in Cameroon (REPAC), SAILD brings together stakeholders from Cameroonian civil society to ensure that the promotion of agroecology is effective. To this end, the first and second general assemblies of REPAC were held in 2024. The two meetings fostered cohesion among the 25 civil society organisations that are members of the network created in 2023.

«During the year, REPAC carried out various organisational activities, including drafting its graphic charter and internal documents concerning the network. Its members were empowered through their significant participation in international events. The network set the tone for agroecology by organising and participating in the regional forum on agroecology held in Yaoundé,» said Rodrigue Kouang, Technical Secretary of REPAC.

STRATEGIC DEPLOYMENT OF SAILD THROUGHOUT THE YEAR

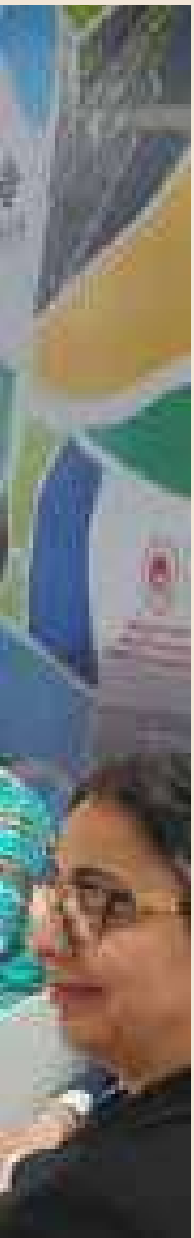
© Desouza Feujio/SAILD

SAILD PARTICIPATION IN EVENTS OF INTEREST

From 16 to 22 November 2024, the Support Service for Grassroots Development Initiatives (SAILD) participated in the 29th Conference of the Parties on Climate Change (COP 29) in Baku, Azerbaijan. Since its creation, SAILD has implemented several actions contributing to the fight against climate change and the preservation of biodiversity. It was therefore with expertise in these areas that the NGO took part in the discussions at the meeting.

'Agroecological economies in their respective contexts' was the theme that brought together some 50 participants, including SAILD, in Harare, Zimbabwe. The event took place from 15 to 19 September 2024 at the African Learning Exchange on Agroecological Economies. The five days of discussions aimed to create a space for sharing knowledge and experiences and to define a common basis for collaboration.

SAILD participated in the tripartite events held from 11 to 14 September 2024 in Kufunda, a village in Zimbabwe, as a representative of the Network for the Promotion of Agroecology in Cameroon (REPAC). These events included the 2nd edition of African Agroecological Entrepreneurship, the Harare Seed and Food Festival, and the 5th biennial celebration of the food system. The aim of these three meetings was to promote health, biodiversity and food sovereignty in order to achieve sustainable and resilient food systems in Africa.



In June 2024, SAILD shared its experience of supporting communities living near Deng Deng National Park. This was at the first African Conservation Forum held in Nairobi, Kenya. 'African solutions for nature and people' was the central theme of this meeting organised by the IUCN (International Union for Conservation of Nature) and the Kenyan Ministry of Tourism and Wildlife.

SAILD COLLABORATIONS IN 2024

SAILD and the National Meteorological Directorate (MINT-DMN) of the Cameroon Ministry of Transport have been partners since 2023. With the effects of climate change becoming increasingly apparent in Cameroon, this collaboration involves SAILD disseminating meteorological information, including forecasts and climate analyses, to farmers and agropastoral stakeholders.

The aim is to provide localised meteorological assistance and raise awareness of the impact of weather on agriculture. In 2024, through its digital and print newspaper 'La Voix Du Paysan' (The Farmer's Voice), the organisation ensured the dissemination of relevant climate analyses to help farmers adapt to their environment.

During the year, SAILD worked jointly with several research institutes. The organisation conducted a study on the potential of agroecology to increase agricultural productivity in Cameroon with the Agricultural Research Institute for Development (IRAD).

«As part of this collaboration, in 2024 we produced a study on the effectiveness of agroecological practices. SAILD defined the framework, and IRAD provided the scientific methodology,» explained Rodrigue Kouang, Head of the Agroecology Programme at SAILD. This study opted for an approach specific to the context of Cameroon in order to establish the direct contribution of agroecology to food sovereignty.

SAILD STAFF EQUIPPED WITH NEW SKILLS

SAILD staff (General Secretariat, Maroua and Bertoua branches) benefited from capacity building in monitoring, evaluation and learning from 26 to 27 September 2024 in Yaoundé. The training, administered by consultant Jean Paul Ngantchou and funded by the German government through the IKI Small Grants programme, brought together 10 participants. The objectives were to strengthen their skills in implementing effective monitoring and evaluation systems and to promote a culture of learning within the organisation in order to improve project performance and results.

Aristide Tchounkeu, an agricultural engineer at SAILD, was trained in the prevention and management of agro-pastoral conflicts. 'For us, it was about learning the basics of relations between livestock farmers and crop farmers, for example, to better manage water points in pastures without encroaching on fields. We took note of the stakeholders who need to be involved in conflict management and their roles,' he explained. In addition, the engineer was trained in the development of land-use planning tools so that each activity has its place and conflicts are limited. This took place at the end of 2024 during workshops organised by the German Cooperation Agency GIZ in Obala (Central Cameroon).

Kevin Boucheke, from SAILD Bertoua, took part in the first phase of certification for 15 Lead Trainers in Women's Entrepreneurship for French-speaking Africa at the International Training Centre campus in Turin (Italy) from 14 to 21 April 2024. The sharing of experiences focused on supporting women entrepreneurs, with a strong emphasis on gender mainstreaming. Two delegations, made up of five Cameroonians and ten Moroccans, were involved in two projects, WAFIRA (Morocco) and KOICA (Cameroon), facilitating the participation of staff from three Cameroonian organisations, including SAILD.

Stéphanie Akono and Salihou Tizi from the SAILD Bertoua branch took part in a training session on 'Green Business' in Bertoua from 10 to 13 December 2024. Organised by the International Labour Organisation, the aim was to provide expertise and support to small businesses on their journey towards environmental sustainability.
